Briggs Presents The Powerful Kingsley™ Turbo 3 Toilet

GOOSE CREEK, SC—Briggs Industries, Inc., announces the release of the powerful Kingsley™ Turbo 3 one-piece toilet. With a reengineered flushing system, the Kingsley Turbo 3 now delivers three times the power of previous models.

The Turbo 3 jet-assisted flushing technology features a 3-in. flush valve that rapidly empties the 1.6-gal tank, creating a powerful vortex that drives water through the wide trapway. This, along with the integral rim jets, ensures a sparkling clean bowl and virtually eliminates clogs. The Kingsley Turbo 3 has even achieved Maximum Performance (MaP) ratings of 600 g (round front) and 800 g (elongated front), proving the toilet's real-world performance.

With its one-piece construction, the Kingsley Turbo 3 allows for simple installation and eliminates the opportunity for leakage between the bowl and tank. The toilet is crafted from durable vitreous china, delivering a pearl-like gleam that is easy to clean and resists scratching, fading and discoloration. It is offered with either a round or elongated front and includes an upgraded wooden seat. Available in white. Biscuit and bone will be available mid-2008.

Briggs Industries, Inc., is a global producer of quality plumbing fixtures, with manufacturing facilities throughout the Americas. Product lines include vitreous china toilets, bidets and lavatories, porcelain-enameled steel bathtubs and kitchen sinks, and the Sayco® brand of faucets. Additional information can be found at www.briggsindustries.com.
